FUND STRATEGY

This investment strategy is built on the fundamental principle of asset allocation, aiming to reduce risk and generate more consistent returns by diversifying across multiple asset classes. Different assets tend to perform well under varying economic conditions, which helps enhance portfolio resilience. The core portfolio includes exposure to equities, fixed income, precious metals, and digital assets.

PERFORMANCE, % GROWTH

GENERAL INFO

ISIN	AMGLUNH01ER0
Fund type	non-public, unclassified, open-ended, contractual
Launch date	29 May 2023
Base currency	USD
Minimum holding period	no
Initial investment, min.	USD 100,000

TRANSACTION FEES

Entry fee	0%
Buyback fee during the first year	1%
after the first year	0%

Disclaimer

The data, views and forecasts in this document is for information purposes only and shall not be regarded as an offer, solicitation or recommendation for an investment. Past performance is no guarantee of future results. All investments involve risks including the risk of possible loss of principal. The market value of a Fund's portfolio may decline as a result of a number of factors, including adverse economic and market conditions, prospects of securities in the portfolio, changing interest rates, and real or perceived adverse competitive industry conditions. The Fund invests in securities and other investments that may be illiquid, which hold the risk that the securities will not be able to be sold at the time desired by the Fund. The Armenian securities markets have substantially less trading volume than the securities markets of OECD countries. Additionally, the capitalization of the Armenian securities markets is highly concentrated. This combination of lower volume and greater concentration in the Armenian securities markets may create a risk of greater price volatility than in the securities markets of developed economies. The views and forecasts contained herein are those of the ROQ Funds team based on information that they believe to be reliable. These opinions may change over time.

MACROECONOMIC UPDATE

In June 2026, the S&P 500 declined approximately 1.32%, as hawkish central bank signals and persistent inflation weighed on risk sentiment. The ECB's June rate hike confirmed that energy-driven inflation was proving sticky, and no major central bank could yet claim a clear path to easing.

Bond markets remained under pressure. The 10-year U.S. Treasury yield held at 4.44% by month-end, as the Fed kept rates unchanged at its June 17-18 meeting but stripped away forward guidance. Fed Chair Warsh withheld his individual dot-plot projection, raising the global uncertainty premium, with money markets pricing in a 33% chance of a U.S. rate hike in July.

The ECB raised its three key interest rates by 25 basis points at its June meeting, bringing the deposit facility rate to 2.25%, citing war-driven energy price pressures and revising its 2026 inflation projection up to 3.0% while cutting the growth forecast to 0.8%.

Commodities diverged sharply. Gold traded at approximately \$4,020 per ounce at month-end, down roughly 10% on the month as rising real yields and a stronger dollar triggered forced liquidations. Bitcoin closed June near its year-to-date low of approximately \$58,559, pressured by record ETF outflows of \$4.3 billion for the month as institutional capital rotated toward elevated sovereign yields.
